AI CAREERS FOR WOMEN

LINKEDIN FELLOWSHIP

EDU-INSIGHTS

Project Domain

Excel

A Collaborative Initiative

equipping students with practical skills in AI, Data Analytics, and Business Intelligence

by: Gorantla Srinidhi

Student Name
Gorantla Srinidhi

Student Email

Guide
Sagar Chetan Mehta

Institution:

Rishi UBR Women's college

Year - 2026

3. Problem Statement

"Boosting Student Outcomes through Data-Driven Decisions: How can we leverage Excel to uncover hidden patterns in student performance, optimize resource allocation, and drive interventions that improve grade distribution and reduce academic risk."

4. Objectives

List the specific goals your project aims to accomplish. Objectives should be clear and measurable.

- Create visualizations (e.g., histograms, scatter plots) in Excel to effectively communicate grade distributions.
- Design Excel dashboards to track student performance trends over time.
- Implement Excel formulas to identify students at risk of falling behind or dropping out.
- Develop a standardized reporting format in Excel for consistent communication of student performance.
- Create Excel models to predict student outcomes based on historical data.
- Optimize Excel workflows to reduce time spent on manual grade analysis and reporting.
- Develop an automated Excel template to streamline data entry and reduce errors in student grade recording

5. Methodology / Implementation Plan

#	Phase	Description
1	**Data Collection & Exploration**	Obtain the raw dataset (CSV / Excel) from Kaggle, Edunet, or any suitable source. Understand field r types, and row count. For AI prompt projects, define the use case and target audience instead.
2	**Data Cleaning & Preprocessing**	Remove duplicates, handle null or missing values, fix incorrect data types, and standardize date and formats using Excel (Remove Duplicates, IF, IFERROR, Text-to-Columns) or Power Query. For prom projects, draft and structure initial prompts using Role, Context, Task, Format, and Tone component
3	**Analysis & AI Integration**	Apply pivot tables, Excel formulas (SUMIF, COUNTIF, VLOOKUP), or Power BI DAX measures to deri insights. Where applicable, use Microsoft Copilot or an AI Chatbot to generate narratives, summarie outputs from the data or prompts.
4	**Visualization / Output**	Build interactive dashboards with charts, KPI cards, and slicers in Power BI or Excel. For AI-assiste compile generated content outputs such as reports, marketing copy, or summaries. Document all AI used alongside their outputs.

5	**Documentation & Submission**	Write the project report, upload all files to a GitHub repository, and record a video demonstration. S GitHub link, video link, and dashboard link (if applicable) for evaluation.

Provide a simple overview of how the project will be carried out. The following five-phase workflow applies to all projects under this fellowship program.

6. Resources and Timeline

A. Hardware & Software Requirements

- Laptop or PC — Intel Core i3 or higher, minimum 4 GB RAM (8 GB recommended)
- Operating System: Windows 10 / 11 or macOS
- Microsoft Excel (Microsoft 365 / Excel 2019 or later)
- Power BI Desktop — latest version (free download from Microsoft) — where applicable
- Microsoft Copilot — via Microsoft 365 subscription — where applicable
- AI Chatbot (ChatGPT / Google Gemini / Microsoft Copilot Web) — for prompt-based projects
- Internet connection — required for Copilot and AI Chatbot access
- Web browser — Google Chrome or Microsoft Edge (latest version)

B. Dataset

- Whether the dataset is already available or needs to be sourced
- Source link if publicly available (e.g., Kaggle, UCI Repository, Edunet-provided)
- If not available, how the dataset will be collected, generated, or simulated
- For AI prompt projects: description of the use case brief and reference content used as input

C. Project Timeline

A simple table showing planned tasks and expected completion dates.

Phase	Task	Tentative Completion Date
1	Dataset collection, exploration, and understanding	this week I am going to find my data set
2	Data cleaning, preprocessing, and validation / Prompt design	This week I am going to work with my project execution

3	Analysis, AI tool integration (Copilot / Chatbot), and insight generation	This week I will try to integrate the ai tools to analyze my data and generate the required insights
4	Dashboard / output build, testing, and review	In this week I will build the final dashboard, test all its features, and review the output for any errors
5	Report writing, GitHub upload, and video recording and submission	In this week I will write the final report, upload my project files to GitHub, and record the video for submission

7. Expected Outcomes / Conclusion

- Identify performance trends: Spot subjects or batches needing extra support.

- Data-driven interventions: Targeted actions for students at risk.

- Resource optimization: Allocate teachers/tutors based on subject difficulty or student needs.

- Enhanced reporting: Dashboards for admins, teachers, and parents.

- Predictive insights: Flag students likely to drop out or need extra help.

8. References

List all references, tutorials, and documentation used in the project. Students must cite any material they referred to, including research papers, GitHub repositories, YouTube tutorials, blogs, and official documentation.
